

## Network Controller EO-NC-3G-40RF8

### Features and Benefits

The Intercept™ EO solution delivers Multigigabit data rates over existing legacy coaxial cabling for rapid and economical deployment in MDU, enterprise or campus environments. Capable of data rates of up to 2.5 Gbps downstream and up to 2 Gbps in the upstream, EO is highly competitive with FTTH services, at a fraction of the cost.

The EO network controller provides full featured functionality and management capabilities for intuitive subscriber management and superior QoE, time to market and rapid activation and implementation of revenue generating services. Designed specifically for MDU applications, the EO system can be implemented in a P2P or P2MP delivery design, and can be routed to the EO CPE device or via Wireless router for reliable high speed data coverage throughout the premise environment.

The Intercept™ EO-NC-3G-20RF8 Network controller is an 8-port Network Controller with full featured functionality targeted to the Multi Dwelling Unit market segment for high speed symmetrical data services. The EO-NC-3G-20R8 Network controller has 8 RF ports and enables high speed data services of up to 2.5 Gbps downstream and 2 Gbps upstream and capable of serving up to 31 subscribers.

The EO solution can utilize RF spectrum between 400 MHz and 900 MHz for legacy networks which have cleared spectrum used for video services, but can also operate in a mode between 1125 MHz to 1675 MHz, leaving all legacy services in place below 1 Ghz. The EO uses MoCA access OFDM technology and can deliver a highly efficient modulation rates up to 1024 k QAM.

The EO solution and Network Controller portfolio provides a highly intuitive cloud management platform for easy onboarding of new subscribers and efficient subscriber and network management.
